FLOOD WATCH

This Evening to Midday Wednesday in Central KY

Overview

Rain today, with heavy rain at times this evening continuing into Wednesday morning.

Rainfall amounts of 1 to 3 inches across the Watch area.

Rain along with moist soils could lead to flooding of low spots, roads, creeks, streams, and a few rivers.

@NWSLouisville

WINTER STORM WATCH

Wednesday through Thursday Morning

Overview

Rain changing to snow over southern IN and north-central and east-central KY Wednesday. Snow may be heavy at times.

Rain changing to freezing rain and sleet over south-central KY Wednesday afternoon, then snow Wednesday night.

Significant snow accumulation likely north of the Cumberland Parkway.

Significant ice possible over parts of south-central KY.

@NWSLouisville

WINTER STORM WATCH *Timing*

Overview

WATCH in effect in all counties in **green** for Wednesday to Thursday morning.

WATCH in effect in **yellow** for Wednesday afternoon through noon Thursday.

@NWSLouisville

Storm Impacts/Cold Weather

- Heavy rain late tonight into Wednesday morning could cause significant ponding of water on roads, and flooding in some locations.
- The winter storm has the potential to bring significant impacts to central KY and south-central IN Wednesday through Thursday morning, including treacherous travel conditions. Four or more inches of snow is looking more likely for much of the area, with some icing also possible across south central Kentucky
- Arctic air will move in after the storm. Low temperatures Friday morning are expected to be around or below zero for most of the region, near record values for early March.
